

**Question :**

Give the sequences of nodes examined when the methods in BST are used to compute each of the following quantities for the tree drawn at below.

- a. floor("Q")
- b. select(5)
- c. ceiling("Q")
- d. rank("J")
- e. size("D", "T")
- f. keys("D", "T")

**Solution:**

22/10/18

\* Ordered Operations on BST :-

H-19, A-3

a)

a) floor ("Q")

$\therefore$  Key < x. Key  
returns x i.e. Q

$\therefore$  Q will be returned.

b) select (5)

Apply inorder to the tree, then the array is

A	D	E	I	H	Q	S	T
0	1	2	3	4	5	6	7

So output is Q.

c) ceiling ("Q")

Ans : Q

d) rank ("J")

Rank of J is 2

e) size ("D", "T")

Rank of D is 2

Rank of T is 2

$$\therefore \text{Ans} = \text{rank}(D) - \text{rank}(T) + 1$$

$$2 - 2 + 1 = \underline{1}$$

f) Keys ("D", "T")
